All battery Packs are the same physical size, weight, and voltage as the OEM battery. All battery packs have equal or greater capacity than that advertised for the OEM battery. Typical capacity is 1500 - 2100 mAH. Most of the Imark Battery Packs utilise the Nickel Metal Hydride technology, thus providing much greater capacity in the same physical case as the original Nickel Cadmium battery pack, almost no Memory Effect, and are more environmentally friendly than Nickel Cadmium.

TECHNICIANS TIP :

All new Nickel Cadmium or Nickel Metal Hydride batteries should be charged at 0.1C and discharged at 0.1C for 5 cycles to ensure optimum capacity.

0.1C = 10% of the nominal battery capacity

e.g. 1500mAh Battery should be charged and discharged at the 150mA rate
